

PRO3 Thesis Evaluation Form – Appendix K

REVISED Dec 27, 2020

De La Salle University
College of Engineering
Department of Electronics & Communications Engineering

PRO3 THESIS EVALUATION FORM

Name of Panelist: _____ Thesis Group No. _____

Thesis Title: _____

Date & Time of Defense: _____ Venue of Defense: _____

SUMMARY OF GRADES

THESIS DRAFT EVALUATION	/40
ORAL PRESENTATION	/20
PROTOTYPE	/40
GRAND TOTAL	/100

Signature of Panelist

Passing Grade: 65%
Minimum Grade for Gold Nomination: 88%

PRO3 Thesis Evaluation Form – Appendix K

A. THESIS DRAFT EVALUATION (40%)

Criteria	Exemplary 1	Satisfactory 0.85	Developing 0.65	Beginning 0.5	Weight	Rating
Problem Statement	The problem statement is presented and articulated clearly and uniquely.	The problem statement is presented and is the problem addressed by the proposed study.	The problem statement is presented but is not directly the problem that the study addresses.	The problem statement lacks articulation and does not describe the issue under study.	1	
	The problem statement formulation is complete and well-founded.	The build-up on the problem statement formulation can be expounded more.	There is a lacking intermediary statement that should bridge the problem to the solution.	The problem statement mimics previous work and lacks uniqueness.	1	
Review of Related Literature	Complete literature review with sound organization.	Comprehensive literature review.	Partially complete and somewhat disorganized.	Incomplete or disorganized.	1	
	All the references sources are refereed sources and properly cited.	There are 1-3 nonrefereed and/or uncited sources.	There are 3-5 nonrefereed and/or uncited sources.	More than 5 of the references are nonrefereed and/or uncited sources.	1	
Significance of the Study	Completely discusses the study's impact in a global, economic, environmental, and societal context (where applicable).	Broadly discusses study's impact in a global, economic, environmental, and societal context (where applicable).	Briefly discusses the study's impact a global, economic, environmental, and societal context (where applicable).	Does not discuss study's impact in a global, economic, environmental, and societal context (where applicable).	1	
	Topic of major importance and specifically related to the field of study. Topic has significant theoretical and practical importance to the field of study.	Topic is important and related to field of study. Topic will moderately add to the body of literature in the field of study.	Topic is of some importance and is related to field of study. Topic will somewhat add to the body of literature in the field of study.	Topic is of little importance or unrelated to field of study. Topic will not add to the body of literature in the field of study.	1	
Constraints Formulation	The design constraints are clearly and precisely presented capturing all the real-world limitations.	The design constraints are presented but not clearly discussed. Some minor real-world limitations are not captured by the identified constraints	The design constraints are presented but are unclear and vague. Major real-world limitations are not captured by the identified constraints.	Little to no design constraints are identified.	1	
	All identified constraints are objectively measurable.	Most of the constraints are objectively measurable.	Less than half of the constraints are objectively measurable.	None of the constraints are objectively measurable.	1	
Project Design Solution	Theoretical framework and methodology to carry out the design of the project <u>satisfies all the identified design constraints.</u>	Theoretical framework and methodology to carry out the design of the project <u>does not satisfy one or two of the identified design constraints.</u>	Theoretical framework and methodology to carry out the design of the project <u>does not satisfy more than half of the identified design constraints.</u>	Theoretical framework and methodology to carry out the design of the project <u>does not satisfy all the identified design constraints.</u>	8	
Data Results	The data presented is comprehensive and shows added insights beyond the requirement of the study.	Data is presented is enough to satisfy the requirements of the study.	Data presented show the results of the study. May need some more data gathering to fully satisfy the requirements of the study.	Little to no data is presented in the manuscript.	8	
Data Analysis	Clear and extensive evidence of a high level of appropriate probabilistic, statistical, and data analysis techniques.	Clear evidence of using appropriate probabilistic, statistical, and data analysis techniques.	Some evidence of using appropriate probabilistic, statistical, and data analysis techniques.	Little or no evidence of appropriate probabilistic, statistical, and data analysis techniques.	6	

PRO3 Thesis Evaluation Form – Appendix K

Conclusion	Conclusion clearly restates the thesis, reinforces the major points and makes a broader statement about the topic.	Conclusion sums up the thesis and reinforces it well.	Conclusion only partially sums up or reinforces the thesis.	Conclusion sums up the thesis poorly with little reinforcement.	2	
Future Directives	Future directives are fully discussed which are prospective research topics.	Future directives are mentioned which could be a possible future study.	Future directives mentioned are trivial and are easily implementable.	No future directives are mentioned.	2	
Professional Responsibility	Adheres to all the engineering standards that apply to the study. Sufficient explanation is provided to explain how the design conforms with the standards.	Discusses the engineering standards that apply to the study and are considered in the study. Design only partially complies with said standards.	Simply recognizes the engineering standards that may apply to the study. No explanation is given whether the study adheres said standards.	Does not recognize nor comply with any engineering standard that may apply to the study.	2	
Manner of Writing	The proposal follows APA style guide consistently and is free from errors in formatting.	The proposal follows APA style guide consistently with only isolated and inconsistent mistakes.	The proposal follows APA style guide only in some parts of the document.	The proposal does not follow the APA style guide for most parts of the document.	2	
	No grammatical, spelling, or punctuation errors.	Contains few grammatical, spelling, or punctuation errors.	Contains several grammatical, spelling, or punctuation errors.	Contains many grammatical, spelling, or punctuation errors that adversely affects the clarity of the manuscript.	2	
SUBTOTAL						/40

PRO3 Thesis Evaluation Form – Appendix K

B. ORAL PRESENTATION (20%)

Criteria	Exemplary 1	Satisfactory 0.85	Developing 0.65	Beginning 0.5	Weight	Rating
Presentation Content	The coverage of the presentation is enough to describe the whole of the thesis.	There are some details missing from the presentation that would have helped describe better the thesis.	There are major details left out from the presentation that would have helped describe better the thesis.	The content of the presentation does little to no help in describing the thesis.	2	
	The content of the presentation is consistent with the submitted documents	There are a few inconsistencies with the submitted documents.	There are several inconsistencies with the submitted documents.	There are blatant inconsistencies with the submitted documents.	2	
Overall Organization	The organization and pacing of the presentation are clear, concise, and easy to follow.	There are some unnecessary parts or missing parts from the presentation that would have made it easier to follow.	Several of the parts of the presentation do not make sense.	There is little to no organization in the presentation.	2	
Presentation Media	The presentation media is easy to read and follow (i.e. visually appealing such as good color contrast and font size).	There are some parts of the presentation that are not easy to follow.	There are only a few parts that were easy to follow.	It is very hard to follow (i.e. not visually appealing, too wordy, etc.)	2	
Non-Verbal Delivery	Holds attention of entire audience with the use of direct eye contact, seldom looking at notes.	Consistent use of direct eye contact with audience, but still returns to notes.	Displays minimal eye contact with audience, while reading mostly from the notes.	Holds no eye contact with audience, as entire report is read from notes.	2	
Verbal Delivery	Speaks with fluctuation in volume and inflection to maintain audience interest and emphasize key points.	Speaks with satisfactory variation of volume and inflection.	Speaks in uneven volume with little or no inflection.	Speaks in low volume and/or monotonous tone, which causes audience to disengage.	2	
	Generally, observes correct grammar throughout the presentation.	Has some grammatical errors in some parts of the presentation but does not really affect meaning of the presentation that much.	Has some several grammatical errors that make it difficult to follow some parts of the presentation.	There are grammatical errors all throughout that adversely affects the meaning of the presentation.	2	
Mastery of Content	The group can answer questions well and with reference to own work.	The group can answer most of the questions well.	Some questions are misunderstood and inadequately addressed.	Misunderstands questions; cannot answer convincingly.	6

PRO3 Thesis Evaluation Form – Appendix K

C. PROTOTYPE (40%)

Criteria	Exemplary 1	Satisfactory 0.85	Developing 0.65	Beginning 0.5	Weight	Rating
Design Considerations	Alternative designs were considered on top of the prototype that meets all the design specification.	The presented prototype meets all the design specifications needed for the study.	The prototype partially meets the design specifications needed for the study.	The prototype does not meet the design specifications needed for the study.	5	
	The prototype design adhered to environmental and safety standards.	The prototype partially adhered to environmental and safety standards.	Environmental/safety considerations were done but is not seen in the actual prototype.	No environmental/safety considerations were included in the prototype design.	5	
	A cost study is done, and the most cost-effective resources were used for the prototype.	A cost study is done and is partially implemented on the prototype.	A cost study is done. However, the findings were not implemented on the prototype.	No cost study is done on the resources used for the prototype.	5	
Aesthetics	The packaging (hardware) and/or front-end visualization (software) are functional and aesthetically pleasing.	The packaging (hardware) and/or front-end visualization (software) are functional.	The packaging (hardware) and/or front-end visualization (software) consideration is seen but may need some improvement.	The construction of the prototype is haphazardly done. The packaging is substandard and/or there is no friendly user interface.	5	
System Performance and Reliability	The prototype is shown to be robust (i.e. functional even in unideal environmental conditions)	The prototype is reliable (i.e. fully functional in ideal and nominal conditions)	The prototype is reliable to a certain degree. The system performance is inconsistent at times.	The prototype is not reliable. The system performance is inconsistent.	5	
Functionality	Prototype is fully functional and has added features that improve the functionality of the prototype.	Prototype is fully functional and meets the criteria and constraints of the project.	Prototype is partially functional and meets many, but not all, the criteria and constraints of the project.	Prototype is not functional and does not meet the criteria or constraints of the project.	5	
Testing and Debugging	The testing done on the prototype is more than what is required.	Sufficient testing is done on the prototype.	Testing is done on prototype but is not as extensive as needed.	The testing on the prototype is grossly lacking.	3	
	The prototype can be easily diagnosed and fixed when errors/faults occur. Prototype proofing is done.	The prototype can be easily diagnosed when errors/faults occur. Marginal prototype proofing is done.	The prototype may be diagnosed with great difficulty when errors/faults occur. Prototype proofing is done but is lacking.	The prototype can no longer be diagnosed/fixed when errors/faults occur. No prototype proofing is done.	2	
System Modularity and Integration	All modules are properly integrated into one working system.	More than half of the modules are integrated into one working system.	Not all modules are integrated into one working system.	No system integration is considered. The system is fragmented.	2	
	Each module is working independently.	More than half of the modules are working as intended.	Less than half of the modules are working as intended.	None of the modules are working as intended.	3
